

# TOPPING APPLICATION

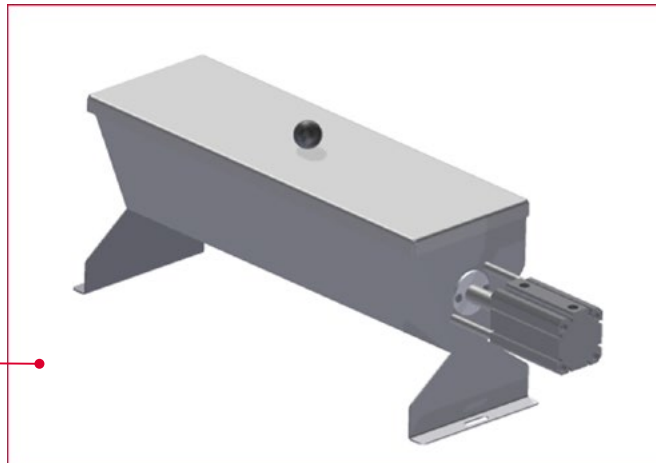

UNITS FOR APPLYING DECORATIONS SUCH AS CHOCOLATE CHIPS, SUGAR, PEANUTS, HAZELNUTS, ALMONDS AND GROUND TOPPINGS, ONTO THE PRODUCT THAT HAS ALREADY BEEN DOSED

**TPT**  
Automatic topping doser for chocolate chips, peanuts, hazelnuts, almond, ground toppings, chocolate shavings.

**TPS**  
Topping for seeds, ground toppings, chocolate shavings, grated coconut.

**TPA**  
Topping doser for sugar, sugar glass, chocolate powder.

CHOCOLATE CHIPS · SUGAR · PEANUTS · HAZELNUTS · ALMOND · GROUND TOPPINGS · CHOCOLATE SHAVINGS · SEEDS · GRATED COCONUT

**FORMEX**

CREATING SOLUTIONS TO DOSE YOUR PRODUCT

## TPT - AUTOMATIC TOPPING DOSER

- Very flexible machine, adapts to all types of toppings. Multi-product operation.
- The topping is dosed in an outlet hopper and is moved along a belt until it falls through funnels and lands on top of the product. A leveller maintains a homogeneous amount of the product on the belt. This system favours the uniform dosing of fragments across the entire product. Adjustable output speed and product flow.
- There are 3 ways to adjust the dose:
  - Through the hopper's leveller (mechanical).
  - Through the speed of the belt with sugar (eletronic).
  - Through the belt movement time.
- Modifications can be made by touch screen with different programmes depending on the product.
- Machine that works as a separate unit. A conveyor is added that works autonomously.

## TPS - SPRINKLES DOSING DEVICE

- Very simple and economical solution for the dispensing of chocolate chips, pieces of nuts, almonds, etc.
- When the piece to be decorated is under the dispenser, a valve is pneumatically activated which opens the holes through which the product falls.
- The outlet orifices can be of different sizes according to the size of the topping and fall through tubes that bring the outlet closer to the decoration point for correct distribution.
- Unit for attaching to a dosing machine.

## TPA - SUGAR DISPENSER

- Pneumatic operation.
- The outlet through which the product falls consists of several small holes through which sugar or powder can be dosed.
- Very simple and economical solution.
- Unit to be attached to a dosing machine.
